

# Aboriginal inventions Aboriginal stone axe

By Marli

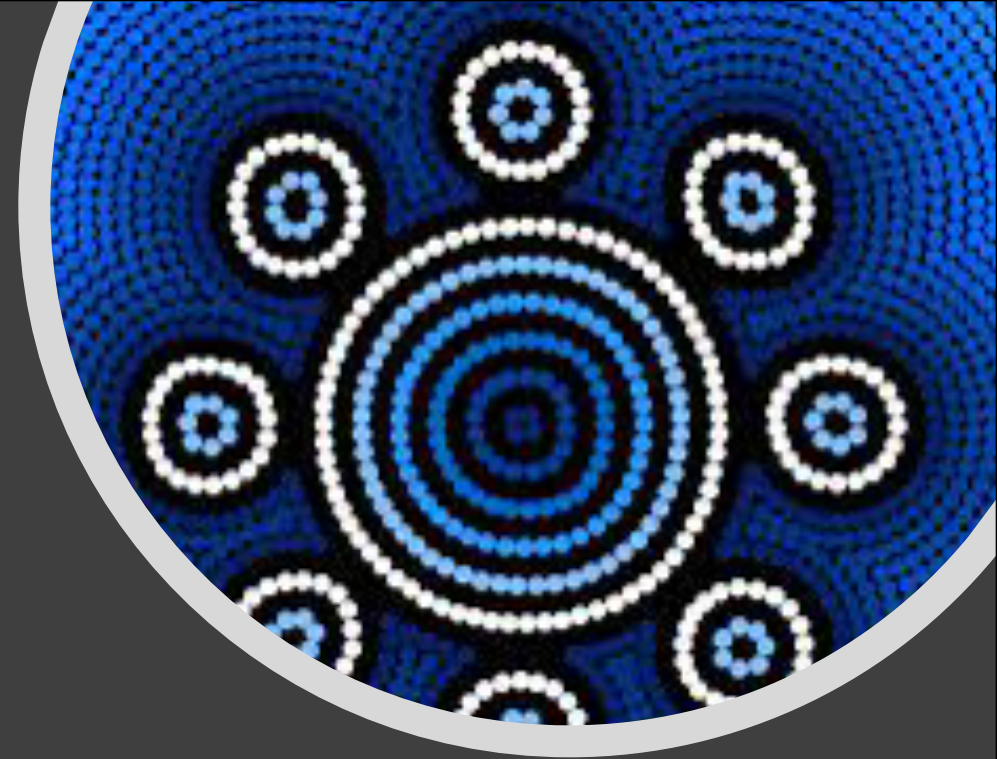

# What are you doing?

- My Aboriginal Invention is an Aboriginal stone axe. A Aboriginal stone axe is around 35,500 years old! People called archaeologist had found that information and more. The stone axe is actually the oldest invention in Aboriginal history! That is surprising how people that discover that information! A stone axe is a invention that Aboriginal people used to invent to use to hunt and create things.

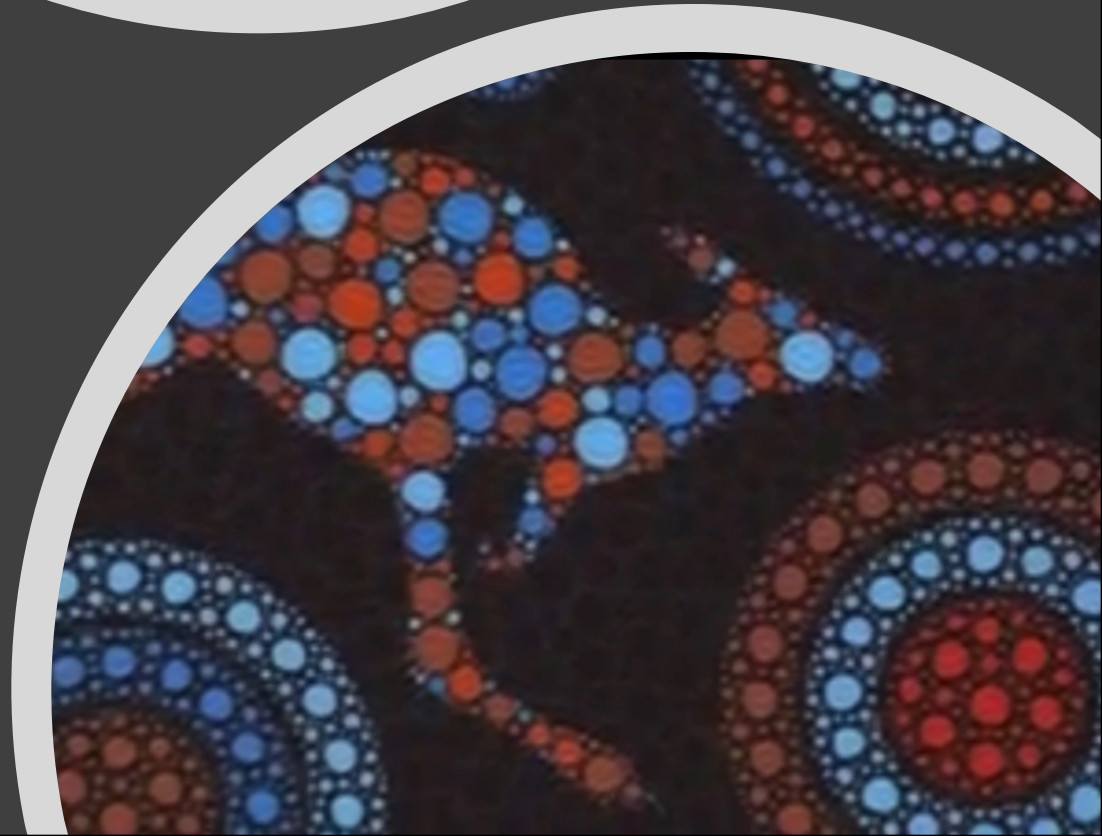

# What is a Aboriginal stone axe made from?

- What is an Aboriginal stone axe made from? The stone axe is made from a piece of stone called core. It can also be with hammer stone as well. And sometimes with a pebble. They would also sharpen the stone the way they wanted it and then use it to make chop a LOT of things.

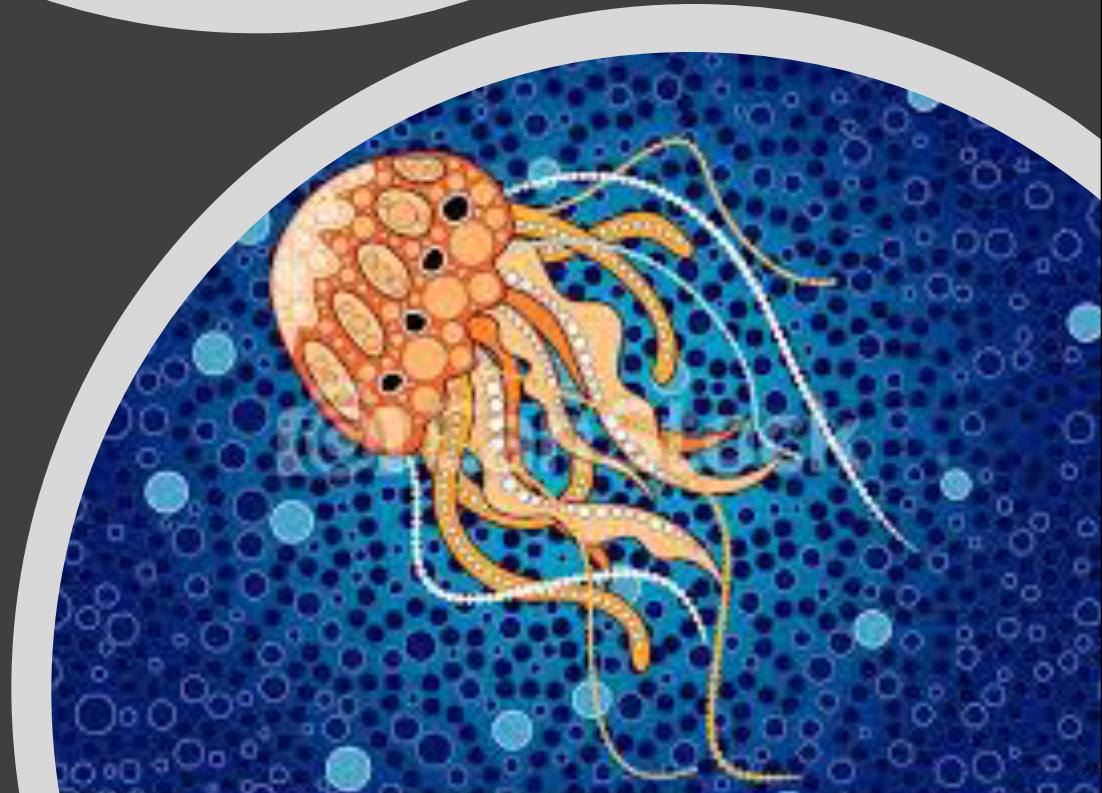

# How is it made?

- The stone axe is made large stones from bumpy outcrops. After they found the stones Aboriginal people would strongly shape the stone and stick together to form an axe. Scientists also have claimed the first time a stone axe was made and found was North Western Australia. People called archaeologist have found out about this information and they are people that study human history.

# What is it used for?

- People may ask what is the stone axe used for? Well you came to the right place to find that out! The stone axe is used for getting bark off trees to make huts and canoes it is also to chop down trees and butcher animals. Common animals they used to butcher are opossum, wild turkeys, kangaroos, emus, anteaters, lizards and snakes. There is so many things they used to use it for but those are some examples.

What do people use today for the same purpose?

- The stone axe is very old. But in other countries or continents there were different culture who used different things. Egypt was one of them. Egypt had a metal axe and it was used for so many things! It was made in 4000 bc and is now still used today as the metal is very strong. Our axes we used today is usually for cutting wood for fires and more. As the stone axe is very old people from Aboriginal culture may still make and use the stone axes.

# What language group was it from?

- Surprisingly the stone axe was probably from every culture group. This beautiful invention was also sometimes also painted by crushing berries. I have decided to do this stone axe because it just looked stunning and interesting to learn about. It is fascinating how this invention was found after thousand of years! Thank you for reading my presentation.
